

Hop on the Money-Saving Solutions Wavelength

Here's a bright concept: LED bulbs provide the essential wavelength for maximizing plant growth while reducing utility costs. You can make a huge impact on your facility's energy use and profitability with incentives for new construction and gut rehab projects from *New Jersey's Clean Energy Program*.™ It's an easy and effective way to upgrade to high-efficiency equipment and increase crop yields.

Eligibility

New indoor horticulture facilities can receive incentives for installing prescriptive or custom energy efficient measures. Single-measure rebates are available through the SmartStart Program, while multiple measures may be eligible for bundling into one application submission through the Customer Tailored EE Program (CTEEP) or Pay for Performance (P4P) Programs.

Single Measure Incentives

SmartStart/CTEEP Programs

Boilers Custom	Ventilation Fans Custom	Dehumidification Custom
Thermostat Controls Custom	Lighting Controls Custom	Thermal Curtains Custom
HVAC Custom	Horticultural Lighting Prescriptive	Pumps Custom

Whole Building Incentives

P4P Program

Ventilation Fans Boilers HVAC Dehumidification Thermostat Controls Lighting Controls Thermal Controls Pumps Horticultural Lighting	Incentive rates paid in three installments. New buildings: \$0.88 - \$1.98/sq. ft.
--	---

Apply using a single application through the CTEEP

Custom Incentives:
 Lesser of \$0.16/kWh, \$1.60/therm savings, 50% project cost, buy-down to 1.0 year payback

Prescriptive Horticultural Lighting Rebates

Facility Type and Runtime Hours:	LED Fixture <500 Watts	LED Fixture ≥500 Watts
DLC-listed LED for use in indoor grow facilities (>3,000 hours/year)	\$150/fixture	\$250/fixture
DLC-listed LED for use as supplemental lighting in indoor grow facilities that primarily use natural sunlight (<3,000 hours/year)	\$50/fixture	\$200/fixture
