

In preparation for the three upcoming stakeholder meetings for the Community Solar Energy Pilot Program Forms, we would like to encourage stakeholders to consider the following questions. Please note that these questions are in no way prescriptive or exhaustive: the topic of the stakeholder meetings is, as indicated in the Notice, comments on the three forms released as attachments to the Notice. We ask that all comments and questions be tailored solely to the draft Application Form, draft Subscriber Organization Registration Form and draft Subscriber Disclosure Form. Board Staff will not be accepting comments or questions on the Community Solar Energy Pilot rule proposal.

Draft Community Solar Energy Pilot Program Application Form:

- How long should the Application Period be open for?
- Should all permits be required to be obtained prior to submitting an application to the Board? Should the interconnection approval be obtained prior to submitting an application to the Board?
- Should the BPU issue additional guidance documents? If yes, what should they contain?
- Please comment on the draft criteria and weighting.
- How can the BPU best assist projects planning to apply to the Community Solar Energy Pilot Program?
- Is there anything missing from the Application Form?

Draft Community Solar Subscriber Organization Registration Form:

- Should the Registration Form more closely resemble the existing Registration Form for Third Party Suppliers (available [here](#))?

Draft Community Solar Subscriber Disclosure Form:

- Is the draft Disclosure Form missing elements or too long?
