

## Notice of Program Changes – Energy Code

On September 21, 2015, and effective as of March 21, 2016, the State of NJ adopted the ASHRAE 90.1-2013 energy code for all commercial and industrial buildings, in regards to energy conservation. Since the energy code change occurs mid-program year and current program efficiencies/designs are based on former code (ASHRAE 90.1-2007), short term modifications were approved to sustain the program through FY16 which were effective May 7, 2016. The changes are necessary to ensure incentives are not paid for technologies that no longer meet or exceed the new energy code. Please refer to the most recent program filing and specific program documents for more details.
