## Make your business more energy efficient

New Jersey offers programs that can reduce your energy use and give your business a competitive advantage while helping to fight climate change. Whether you are a large energy user, a local government looking for a place to start, or a business upgrading your facilities, take advantage of our financial incentives for energy efficient equipment and technologies that will pay dividends on your investments.

Want lower utility bills? Our programs can help make your facilities more efficient, whether you're upgrading a single piece of equipment or a comprehensive bundle of technologies.

Purchase LEDs with the ENERGY STAR® or DLC® logo. These bulbs use 70-90% less energy than traditional incandescent bulbs, last at least 15 times longer, and save about \$50 in electricity costs over their lifetime.

Make smart decisions on HVAC systems like furnaces, boilers, air conditioners, or water heaters. If your unit is more than 15 years old, replacing them with a more efficient version could save you hundreds per year!

Investing in custom designed systems and new technologies that are more efficient ensures financial savings over the course of the equipment's lifetime.

Restaurants use five to seven times more energy than other commercial facilities. By using efficient cooking, holding, cooling, and cleaning equipment, food services facilities can lower their bills and improve their bottom line.

**Join the thousands of businesses that have taken advantage of New Jersey's clean energy incentives and programs that can save energy and money while helping protect our environment.**

**NJCEP currently offers energy efficiency programs that will be expanded after July 1, 2021 by New Jersey's gas and electric utility companies.**
