Honorable Irene Kim Asbury
Secretary
State of New Jersey
Board of Public Utilities
44 South Clinton Avenue, 3rd Floor, Suite 314
Post Office Box 350
Trenton, NJ 08625-0350

Re: Semi-Annual Net Metering and Interconnection Report

Dear Secretary Asbury:

Pursuant to the requirement of N.J.A.C. 14:8-4.5 and 14:8-5.9, enclosed please find Rockland Electric Company's semi-annual net metering and interconnection report.

Questions regarding the report can be directed to Cheryl Ruggiero at (212) 460-3189.

Very truly yours,

A handwritten signature in black ink, appearing to read 'William A. Atzl, Jr.', is written over a light blue horizontal line.

William A. Atzl, Jr.
Director – Rate Engineering

cc: Stefanie A. Brand, Esq., Division of Rate Counsel

Semi-Annual Net Metering and Interconnection Report

August 2016

Rockland Electric Company

Rockland Electric Company
Net Metering and Interconnection Report
January 1, 2016 to June 30, 2016

Months	Number of Solar Systems	Number of Wind Systems	Number of Biomass Systems	Total number of Systems ¹	Generation			Total Generation Ratings (kW)
					Generation Ratings Solar (kW)	Generation Ratings Wind (kW)	Ratings Biomass (kW)	
January-16	6	0	0	6	52.0	0.0	0.0	52.0
February-16	7	0	0	7	36.6	0.0	0.0	36.6
March-16	9	0	0	9	65.7	0.0	0.0	65.7

June-16	30	12,446.6	1,871,513	1,344,231	3,215,744	\$148.71	53	8
Total:			11,520,726	8,000,350	19,521,076	\$3,539.11	270	58

1. This represents the number of systems. A single customer may have multiple systems.

2. The monthly estimated solar generation based on the total generation rating of systems installed and activated by the end of each month during the reporting period times the solar array's inverter estimated efficiency (80%) * 4.5 (NREL's average hours of sunlight per day for New Jersey) *calendar days for month. This formula is based on an annual standard used in other Company jurisdictions.

Note that this estimated does not take into account the variations in the site-specific installation details, such as array orientation, tracking devices and obstacles that can cast a shadow and/or panels that fail to meet the manufacturer's minimum output rating. It also does not take into consideration that the average hours of sunlight per day may differ for different months.

3. The estimated kilowatt hours delivered to the customer-generator through the distribution system is calculated by taking the customer-generator energy supplied to the distribution system plus the customer-generator's actual consumption either positive or negative for the billing months during the reporting period.
